Objective

After working for 5 years on the Isle of Man, I made the difficult decision to leave my job and travel. I am currently looking for interesting opportunities to expand my development and management knowledge in the web and mobile technology space.

Education

Isle of Man College

BTEC National Diploma

IT Networking Professional

University of Chester

BSc (Hons) Computer Science

1st Class

Experience

I am a believer of open-source, and as such, examples of work can be found on my Github profile, linked to from my personal website.

PokerStars / Rational Group - Senior Web Software Engineer (2013)

Starting as a Web Developer and being promoted to Senior Web Software Engineer, I was part of and managed many projects involving internal and external developers. My main duties were to lead the front-end Angular development, architect and build Node.JS services, and take part in technical discussions. Other responsibilities included developing features for a Perl based CMS, supporting multiple WordPress instances, managing virtual servers and prototyping web applications for various business units.

Cont.

Iforium Ltd - Multi-Vendor Casino Platform - Software Engineer (2012)

I learned a lot about working in an agile development team, my main duties were to develop the front-end for casino sites and to extend the back office system. On a daily basis I worked with C#, MSSQL, XSLT, JavaScript, and HTML, working on anything from front-end payment provider integration to seamless game launching. Other side projects include Linux server installs and prototyping mobile applications for clients.

Nobles Hospital - Technical Volunteer Placement (2011)

3Legs Web Development - Junior Developer (2011)

Create plug-ins for an open source text editor (TinyMCE), design JavaScript components such as image galleries for use on many clients' websites. I became proficient using the Linux shell while developing an Android Java app for a local news station, it involved learning about services, multi-threading and custom views.

Netcetera Web Hosting - Data Centre Technician (2010)

Main tasks included installing and repairing physical servers, diagnosing network problems, and redesigning the internal IP database web interface which was written in ASP and used MySQL.

Skills

O/S: Windows (Various), Linux (Ubuntu & CentOS)

Languages: JavaScript (ES5 + ES6, Angular, React, Node & Express), Perl, C#, HTML, CSS3, SASS & LESS, UNIX shell

Databases: PostgreSQL, MSSQL, MongoDB, Redis

Network: Apache, NGINX
